Frontend Developer | UI/UX-Focused Engineer

I'm a frontend developer who cares about how things feel just as much as how they work.

My focus is building modern web applications that combine clean architecture with thoughtful, user-centered design. I work primarily with React and JavaScript, and I use tools like GSAP and Three.js to bring interfaces to life through motion and interaction.

I'm also the founder of CodeHerWay, where I design and build learning experiences for women entering tech. That work has pushed me beyond tutorials and into real product development.

I'm especially interested in roles where I can contribute to both the technical build and the user experience, creating products that are not just functional, but genuinely engaging to use.

• SKILLS

- Frontend: HTML5, CSS3, JavaScript (ES6+), React
- UI/UX: Responsive Design, Accessibility (WCAG), Interaction Design
- Animation: GSAP, ScrollTrigger, Three.js (WebGL basics)
- Tools: Git, GitHub, Vite, Netlify
- Backend (Working Knowledge): Supabase, REST APIs, PostgreSQL

• EDUCATION

FULLSTACK WEB DEVELOPER CERTIFICATE

FullStack Academy (Powered by UIC) | May 2022

Master's Degree - Engineering & Management Systems

Crambridge Global | May 2020

Bachelor's Degree - Information System Security

American Public University | Sept. 2014

Bachelor's Degree - Psychology

Saint Xavier University | May 2010

• EXPERIENCE

FREELANCE WEB DEVELOPER

Self-Employed | Chicago, IL

- Designed and developed responsive websites for small projects
- Focused on modern UI/UX and performance optimization
- Collaborated with clients to translate ideas into functional interfaces

CODEHERWAY FRONTEND DEVELOPER EDUCATION PLATFORM

Full-stack learning platform built to teach frontend development concepts through structured lessons, quizzes, & progress tracking.

- Built using React, Vite, Supabase, and PostgreSQL
- Implemented user auth, progress tracking, and reward systems
- Designed modular lesson architecture for scalable course creation
- Integrated interactive UI components (quizzes, code previews)
- Focused on accessibility and clean UX for beginner developers

Tech: React, JavaScript, Supabase, PostgreSQL, Vite

CEO OS

Productivity & decision-support dashboard designed to help manage priorities, opportunities, & workflows.

- Built a modular dashboard UI with persistent state management
- Designed systems for tracking opportunities, content workflows, and weekly planning
- Implemented reusable UI components (cards, modals, tables)
- Focused on clarity, usability, and real-world decision-making workflows

Tech: React, JavaScript, Local State, UI Architecture

AURA WEATHER API

Modern weather application focused on clean UI, performance, & real-time data visualization.

- Integrated external weather API for real-time data
- Built responsive UI with dynamic weather states
- Focused on performance and user-friendly design
- Implemented clean component structure for scalability

Tech: JavaScript, APIs, CSS, Responsive Design
