Summary

Frontend developer building accessible, responsive applications with strong UI architecture and thoughtful user experience. Experience includes product-style applications with authentication, progress tracking, reusable components, and API integration.

Technical Skills

- **Frontend:** React, JavaScript (ES6+), HTML5, CSS3, Vite
- **UI/UX:** Responsive design, accessibility (WCAG), semantic HTML, interaction design, visual hierarchy
- **APIs & Data:** REST APIs, Supabase
- **Tools & Workflow:** Git, GitHub, Netlify

Experience

Freelance Web Developer — Self-Employed, Chicago, IL | January 2021 – Present

- Designed and developed responsive web interfaces for small projects and client-facing websites.
- Translated client goals into usable layouts, component structures, and polished frontend experiences.
- Built and deployed projects using HTML, CSS, JavaScript, Git, GitHub, and Netlify.

Selected Projects

CodeHerWay — Frontend Learning Platform

React, Vite, Supabase | Founder and sole frontend engineer | Live demo | Case study | Code walkthrough on request (private repository)

- Built the React product UI for a learning platform with Supabase authentication and data, structured lessons, quiz feedback, and persisted learner progress.
- Designed a modular lesson/course content architecture to support scalable course creation and future content expansion.
- Implemented a deduplicated, retry-safe progress system so counts stay accurate across retries and sync failures.

CEO OS — Productivity Dashboard

React, React Router, Vite, localStorage | Sole designer and engineer | Live demo | View code | Case study

- Built a modular, local-first founder dashboard (focus view, opportunity pipeline, weekly planning) with reusable workflow components.
- Implemented a repository-pattern data layer across 8 domains with versioned storage, migrations, and optimistic-concurrency handling.
- Added corruption recovery and an offline write queue; organized complex data into clear, scannable views.

Aura Weather — Responsive Weather Application

React, Vite, JavaScript, CSS | Sole frontend engineer | Live demo | View code | Case study

- Built a weather dashboard composing three API sources with independent fetch lifecycles and expandable forecast views.
- Implemented defensive data handling (nullish-rejection contracts, honest missing-data states) with loading/error UI, offline last-known restore, and a PWA shell.

Education & Certification

Fullstack Web Developer Certificate — FullStack Academy (Powered by UIC) | May 2022

Master's Degree — Risk Management — Cambridge College Global | December 2020

Bachelor's Degree — Information System Security — American Public University | September 2014

Bachelor's Degree — Psychology — Saint Xavier University | May 2010
